

PRESS RELEASE

C-FLY Ocean – The hydrofoil sailing game changer

C-FLY Ocean represents the emergence of a new species of hydrofoil sailing boat. She will be the 18m big sister to C-FLY Coastal; the revolutionary 40 knot, 8m hydrofoil sailing catamaran.

C-FLY has unique pioneering foil technology that enables sailing at high average speeds, in extreme wind and sea conditions. The hydrofoil configuration is analogous to a fighter jet plane where the craft is guided by forward mounted hydrofoil canards and lifted by rear mounted main foils. Unlike any other hydrofoil in existence, there is no need for pitch control systems; liberating her to tackle even the most aggressive sea conditions. Additionally, the foils can be raised out of the water to enable her to press on in light airs.

C-Fly Ocean will be capable of challenging for the world's greatest records such as the Transat, Transpac and Round-the-World trophies.

Philip Kenchington, Team Operations Manager says, "As a scaled-up C-FLY Coastal, she'll be an absolute monster, able to eat nautical miles at a rate that has never been seen before. Our working and fully tested prototype has been gaining serious interest from the sailing industry as well as significant media coverage from both TV and mainstream press."

The C-FLY engineers say that they are now actively looking for a partner to launch this great adventure: to create the fastest deep-water sailing boat, in the world.

C-FLY is a unique British endeavour to revolutionise high speed sailing and recapture the worlds deep water sailing records. Developed by leading aerospace engineers the technology has been proven with a 7.6m prototype, C-FLY Coastal.
